Experience

- **Macquarie Group** — New York, NY

Executive Software Engineer - L4 — *Jun 2023 - Present*

- Lead end-to-end architecture and implementation of an exclusive deal type for Credit Markets under Fixed Income & Commodities on a C++ platform, mananging *32%* more book value with several hundred open trades; coordinated across Risk, Finance, and Legal Management groups alongside up-and-downstream Tech teams to integrate capabilities into established trading and risk platforms
- Architected Claude-based AI contract document generation with optional Chatbots using Bedrock to parse and relay embedded contract data with effective confidence levels to approval teams, eliminating days worth of manual documentation and generation for key stakeholders
- Designed calculator strategies for Loans handling all revenue metric computations including accrued fees, revaluation, and forward cash projections that model complete deal lifecycles
- Built Python STP pipelines for CDS/CDX trades from Bloomberg, parsing FIX protocol messages via stunnel-secured connections with attributization-based data transformation and templating engine for automated deal type entry, eliminating manual trader input for real-time trade capture
- Partner directly with Front Office traders on the floor to facilitate trade execution, debug system issues, and manage live trades in real-time as they flow through booking and risk management systems
- Lead ongoing enhancement and troubleshooting of multi-language trading platform (C++, Java, Python, TypeScript), ensuring system reliability and feature delivery for critical financial operations

Executive Software Engineer - L3 — *Nov 2021 - Jun 2023*

- Designed and built comprehensive trade capture screens in Angular/AngularJS (JavaScript) with subsequent TypeScript conversion, enabling traders to book, terminate, rewind, and settle Bonds, Loans, and Settlement trades in a unified platform
- Implemented automated ingest feeds from external counterparties using AWS infrastructure (Lambda, S3, SNS, SQS, Aurora PostgreSQL) to streamline data intake and processing workflows
- Developed and maintained customizable dashboards in Java and Angular/TypeScript with nested YAML configs, including Python-based web API for displaying real-time trade payloads with built-in reporting capabilities, supporting many daily active traders

- **SportsMEDIA Technology** — Jacksonville, FL

Senior Application Developer — *Apr 2019 - Oct 2021*

- Managed and supported *30+* real-time data flow C++ and Python applications including Match Scheduling, Chair Umpire Score Entry, and Camera/Radar Interfaces for tennis tournament staff, officials, and spectators
- Rewrote multi-page tennis reporting software reducing generation time from 3-minute minimum to 3-second maximum with automated event-based reports, significantly minimizing manual execution time throughout tournaments
- Led onsite software deployment and support at five grand-slam tennis tournaments, providing real-time troubleshooting and user assistance
- Upgraded applications to 64-bit Qt platform eliminating memory constraints and deadlock issues while modernizing interfaces with dark-mode implementations

- **University of North Florida** — Jacksonville, FL

Computational Geometry Research Assistant — *Sep 2018 - Jul 2019*

- Developed 7-approximation algorithm for Unit Disc Cover problem achieving 98% performance improvement in $O(n)$ time; published in Analysis of Experimental Algorithms by Springer International and presented at Sea^2 conference in Kalamata, Greece

Education

- **University of North Florida** — Jacksonville, FL

Bachelor of Science in Computer Science — *Aug 2017 - April 2019*

- **Columbia University** — New York, NY

Continuing Education - Advanced Java and C++ Programming — *May - Jul 2015*

Skills

- **Languages**: C++, Python, Java, TypeScript, JavaScript, Lua, Perl, SQL, XSL, HTML/CSS, C, Unix Scripting
- **Frameworks & Tools**: Angular/JS, React, Qt, AWS (Lambda, S3, SNS, SQS, Bedrock, Aurora PostgreSQL), ReportLab, LaTeX, Bazel, CORBA, Docker, Kubernetes, Splunk, Grafana, Git, JIRA, Helix
